Example 8: Page 99-100; 182pp; English.
NR6 is a novel haemopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in
                                                                                                                                                                                                                                                                                               840
                                                                                                                                                                                                                                                                             840

Interaction the NR6 protein is a novel Haemopoletin receptor (HR). Interaction, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to requiate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

New isolated haemopoletin receptor - used for developing products

Tor modulating proliferation, differentiation and survival of cells,

For modulating proliferation, differentiation and survival of cells,

Tor modulating proliferation, differentiation and survival of cells,

Claim 8; Page 108-114; 182pp; English.

Chetween the novel HR and a ligand facilitates proliferation,

differentiation and survival of a wide wariety of cells. The HR and it's

Chetween the novel HR and a ligand facilitates proliferation,

Chetween the novel HR and a ligand facilitates proliferation in an array of

Chetweent cells and tissues in vitro and in vivo. They can be present in

Chermeter cells and tissues in vitro and in vivo. They can be present in

Chermeter cells and tissues in vitro and in vivo. They can be present in

Chermeter cells and tissues in vitro and in vivo. They can be present in

Chermeter cells and tissues and sho be used for detection and diagnosis,

and survival. The products can also be used for drug screening.

                                                    e.g. neuronal cells
Claim 5; Page 84-87; 182pp; English.
The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6.
Interaction between the novel HR and a liqand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

This is the nucleotide sequence encoding the murine U4 protein from the haematopoletin receptor superfamily, used in the method of the invention for the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as issue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, sequence 1656 BP; 318 A; 552 C; 478 G; 308 T;

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects. Sequence 1724 BP; SSO C; SSO G; SSO T;

between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to requiate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening. Sequence 1391 BP; 281 A; 459 C; 417 G; 234 T;

administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe and integrity of the Zcytor5 gene on chronsome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and therapeutically to modify Zcytor5 ligand effects. Sequence 1813 BP; 415 A; 604 C; 519 G; 275 T;

This is the nucleotide sequence encoding the human U4 protein from the haematopoietin receptor superfamily, used in the method of the invention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and

down-regulating Zcytor5 natural ligands or detecting cardiotrophin-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 63-66; 55pp; English.

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the
                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents an expressed sequence tag (EST) used to identify cDNA encoding a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-lon cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and
blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and therapeutically to modify Zcytor5 ligand effects. Sequence 1690 BP; 319 A; 592 C; 505 G; 274 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         961 GCCACCGTGTACTTCGTGCAAGTGCGCTGCAACCCCTTTGGCATCTATGGCTCCAAGAAA 1020

T useful therapeutically

Claim 1; pages 15-19; 36pp; English.

Claim 1; pages 15-19; 36pp; English.

CC The sequence 1s that of at least part of the RNA genome of the equine

CC The sequence 1s that of a least part of a recombinant

CC DAN vector comprising a DNA sequence complementary to part of

CC adjacent to its 3'-end a non-EAV specific promoter for a non-EAV

CC adjacent to its 3'-end a non-EAV specific promoter for a non-EAV

CC specific RNA polymerase. The RNA and the vector can be used to

CC specific and for therapeutic use. The vector can be

CC make viral particles and for therapeutic use. The vector can be

CC stably incorporated into host cells and produces infectious RNA.

Equine arterilis virus expression vector pEAV030.
equine arteritis; genome; EAV; detection; therapy; cyclic; circular;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ecombinant DNA vector that produces infectious RNA of equine interitis virus - and derived RNA, host cells and virus particles,
                                                                                                                                                                                                                                                                                                                              "synthetic sequence with unique XhoI site"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence is that of of a recombinant DNA vector, pEAV030, comprising a DNA sequence complementary to part of the genome of equine arteritis virus (EAN) which has adjacent to its 3 -end a non-EAV specific promoter for a non-EAV specific RNA polymerase. It can be used to make viral particles and for therapeutic use. The vector can be stably incorporated into host cells and produces infectious RNA. 3972 G; 4123 T; sequence 15528 BP;
                                                                                                                                                                                                                                                      "Bacteriophage T7 promoter sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              UYLE-) RIJKSUNIV LEIDEN.

oligo-dr track served to identify it as a clone from the normalized adult Brain library. cDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research Genetics The following repetitive elements were found in this cDNA sequence: 1-35, >POLY_A#Simple_repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         converted to double-stranded circles and electroporated into DHIOB bacteria (Life Technologies) to generate the UI-R-Al library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             369 AGCGTCAGGCTTCACTGCATCATCCAGCTGCTGAAAGGGAGTCATCTCAAGACTCCCAGG 310

/loce="vector: pT733-pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco Ri; The UI-R-C2 library is a subtracted library derived from the UI-R-C3 library, which is a subtracted library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung brain, liver, kidney, heart, spleen, ovary, muscle, 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-C2) was constructed as follows: PCR amplified CDNA inserts from UI-R-C1 clones from which 3' ESTS had been derived was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence tag present in the cDNA between the NotI site and the oligo-dI track served to identify it as a clone from the normalized adult Lung library. cDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          used as a driver in a hybridization with the UI.R-CI
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,

polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-C3
library is a subtracted library of a series, ultimately
derived from a mixture of individually tagged normalized
libraries from rat placents of adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, and 8, 12 and 18-day
embryos, after a series of subtractions to reduce the
representation of CONAS from which ESTS had already been
generated. The following serially subtracted libraries
were generated in this process: UI-R-C3, UI-R-C2P,
UI-R-C1, UI-R-C0, UI-R-A1, The tag is a string of
3-5 nucleotides present between the Not I site and the
oligo-dit track whichallows identification of the library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    University of Iowa 451 Eckstein Medical Research Building Iowa City, IA 52242, USA Tel: 319 335 8250

The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Noti Site and the oligo-dr track served to identify it as a clone from the normalized 18 day embryo library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Seg primer: M.3 Forward.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    library (UI-R-C3) was constructed as follows: PCRamplified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Mammalia; Eukaryota; Metazoa; Chordata; Craniata; Muridae; Murinae; Rattus. 1 (bases 1 to 234)

```
cDNA inserts from UI-R-C2p clones from which 3' ESTs had been derived was used as a driver in a hybridization with the UI-R-C2p library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into BHIOB bacteria (lifeTechnologies) to generate the UI-R-C3 library. This procedure has been previously described (Bonaido, Lennon and Soares, Genome Research 6:791-906, 1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             'n
